# UX & Marketing: Can We Do More?

# Introduction

# Meet the team

**Jenn Stack**

Int. UX Designer

**Mahsa Yavari**

Sr. UX Designer

**Jackie Chow**

Director, UX

**Armin Tabrizi**

Manager, UX

***Purpose:*** To review a case study about UX & Marketing collaboration at ecobee, with a specific focus on the launch of the Smart Baby Monitor.

## CONTENTS

- 01 Who is ecobee?
- 02 How we used to work
- 03 How we have evolved
- 04 Our current workflow
- 05 New approaches
- 06 Moving forward

Who is ecobee?

# How we used to work

## Product

- Website
- Value props
- Content

## Marketing

- Imagery

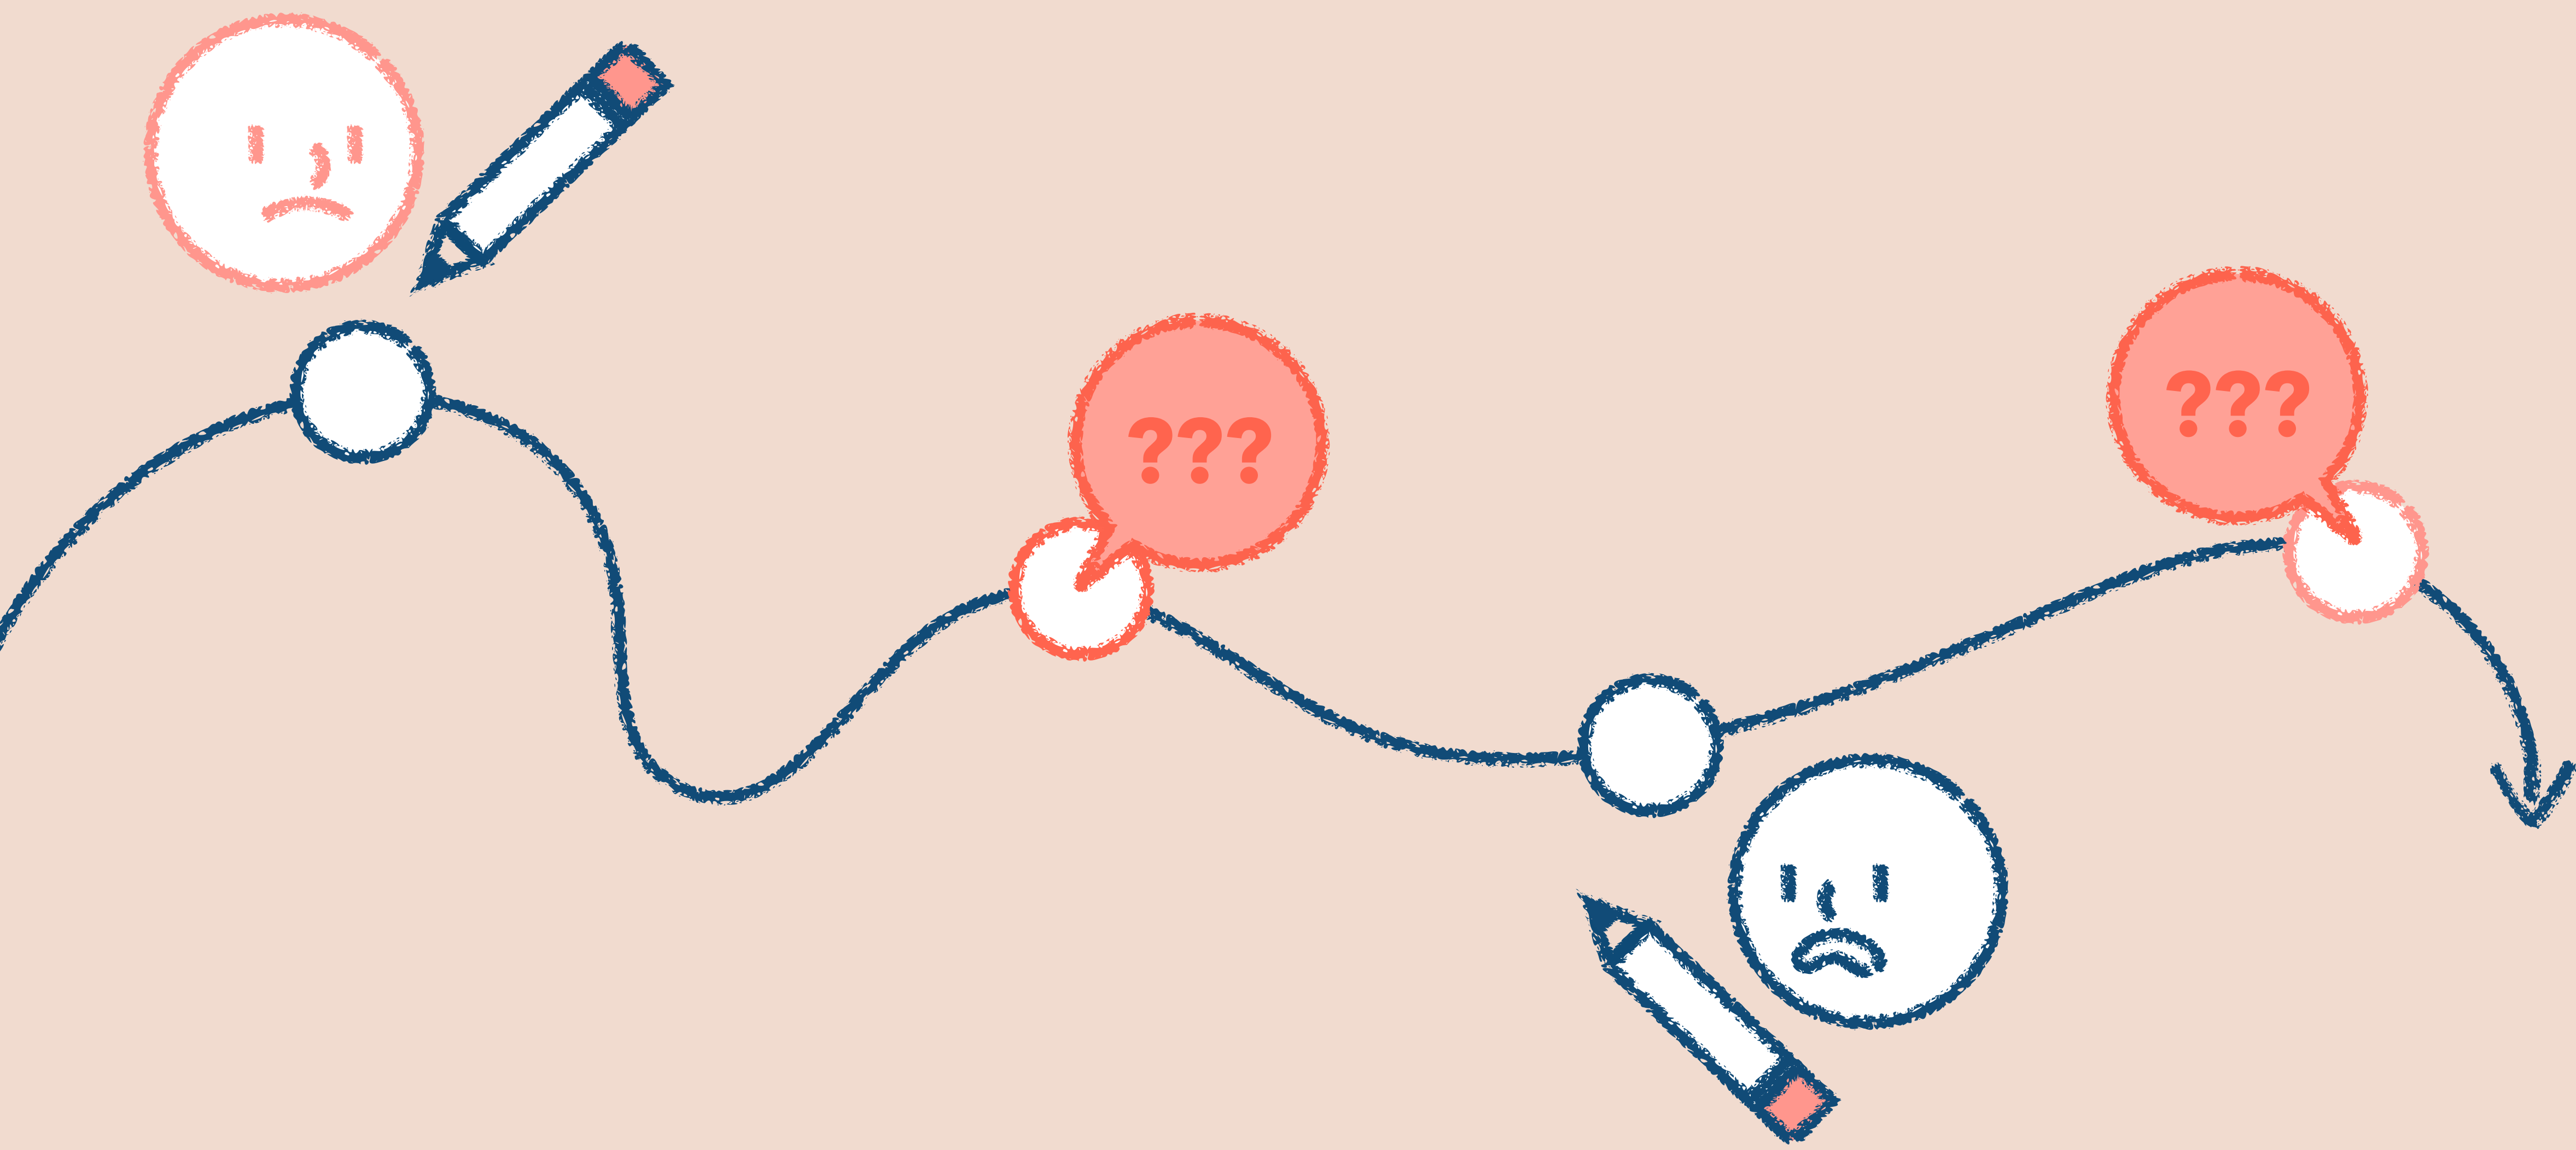

**Product**

**UX**

**Marketing**

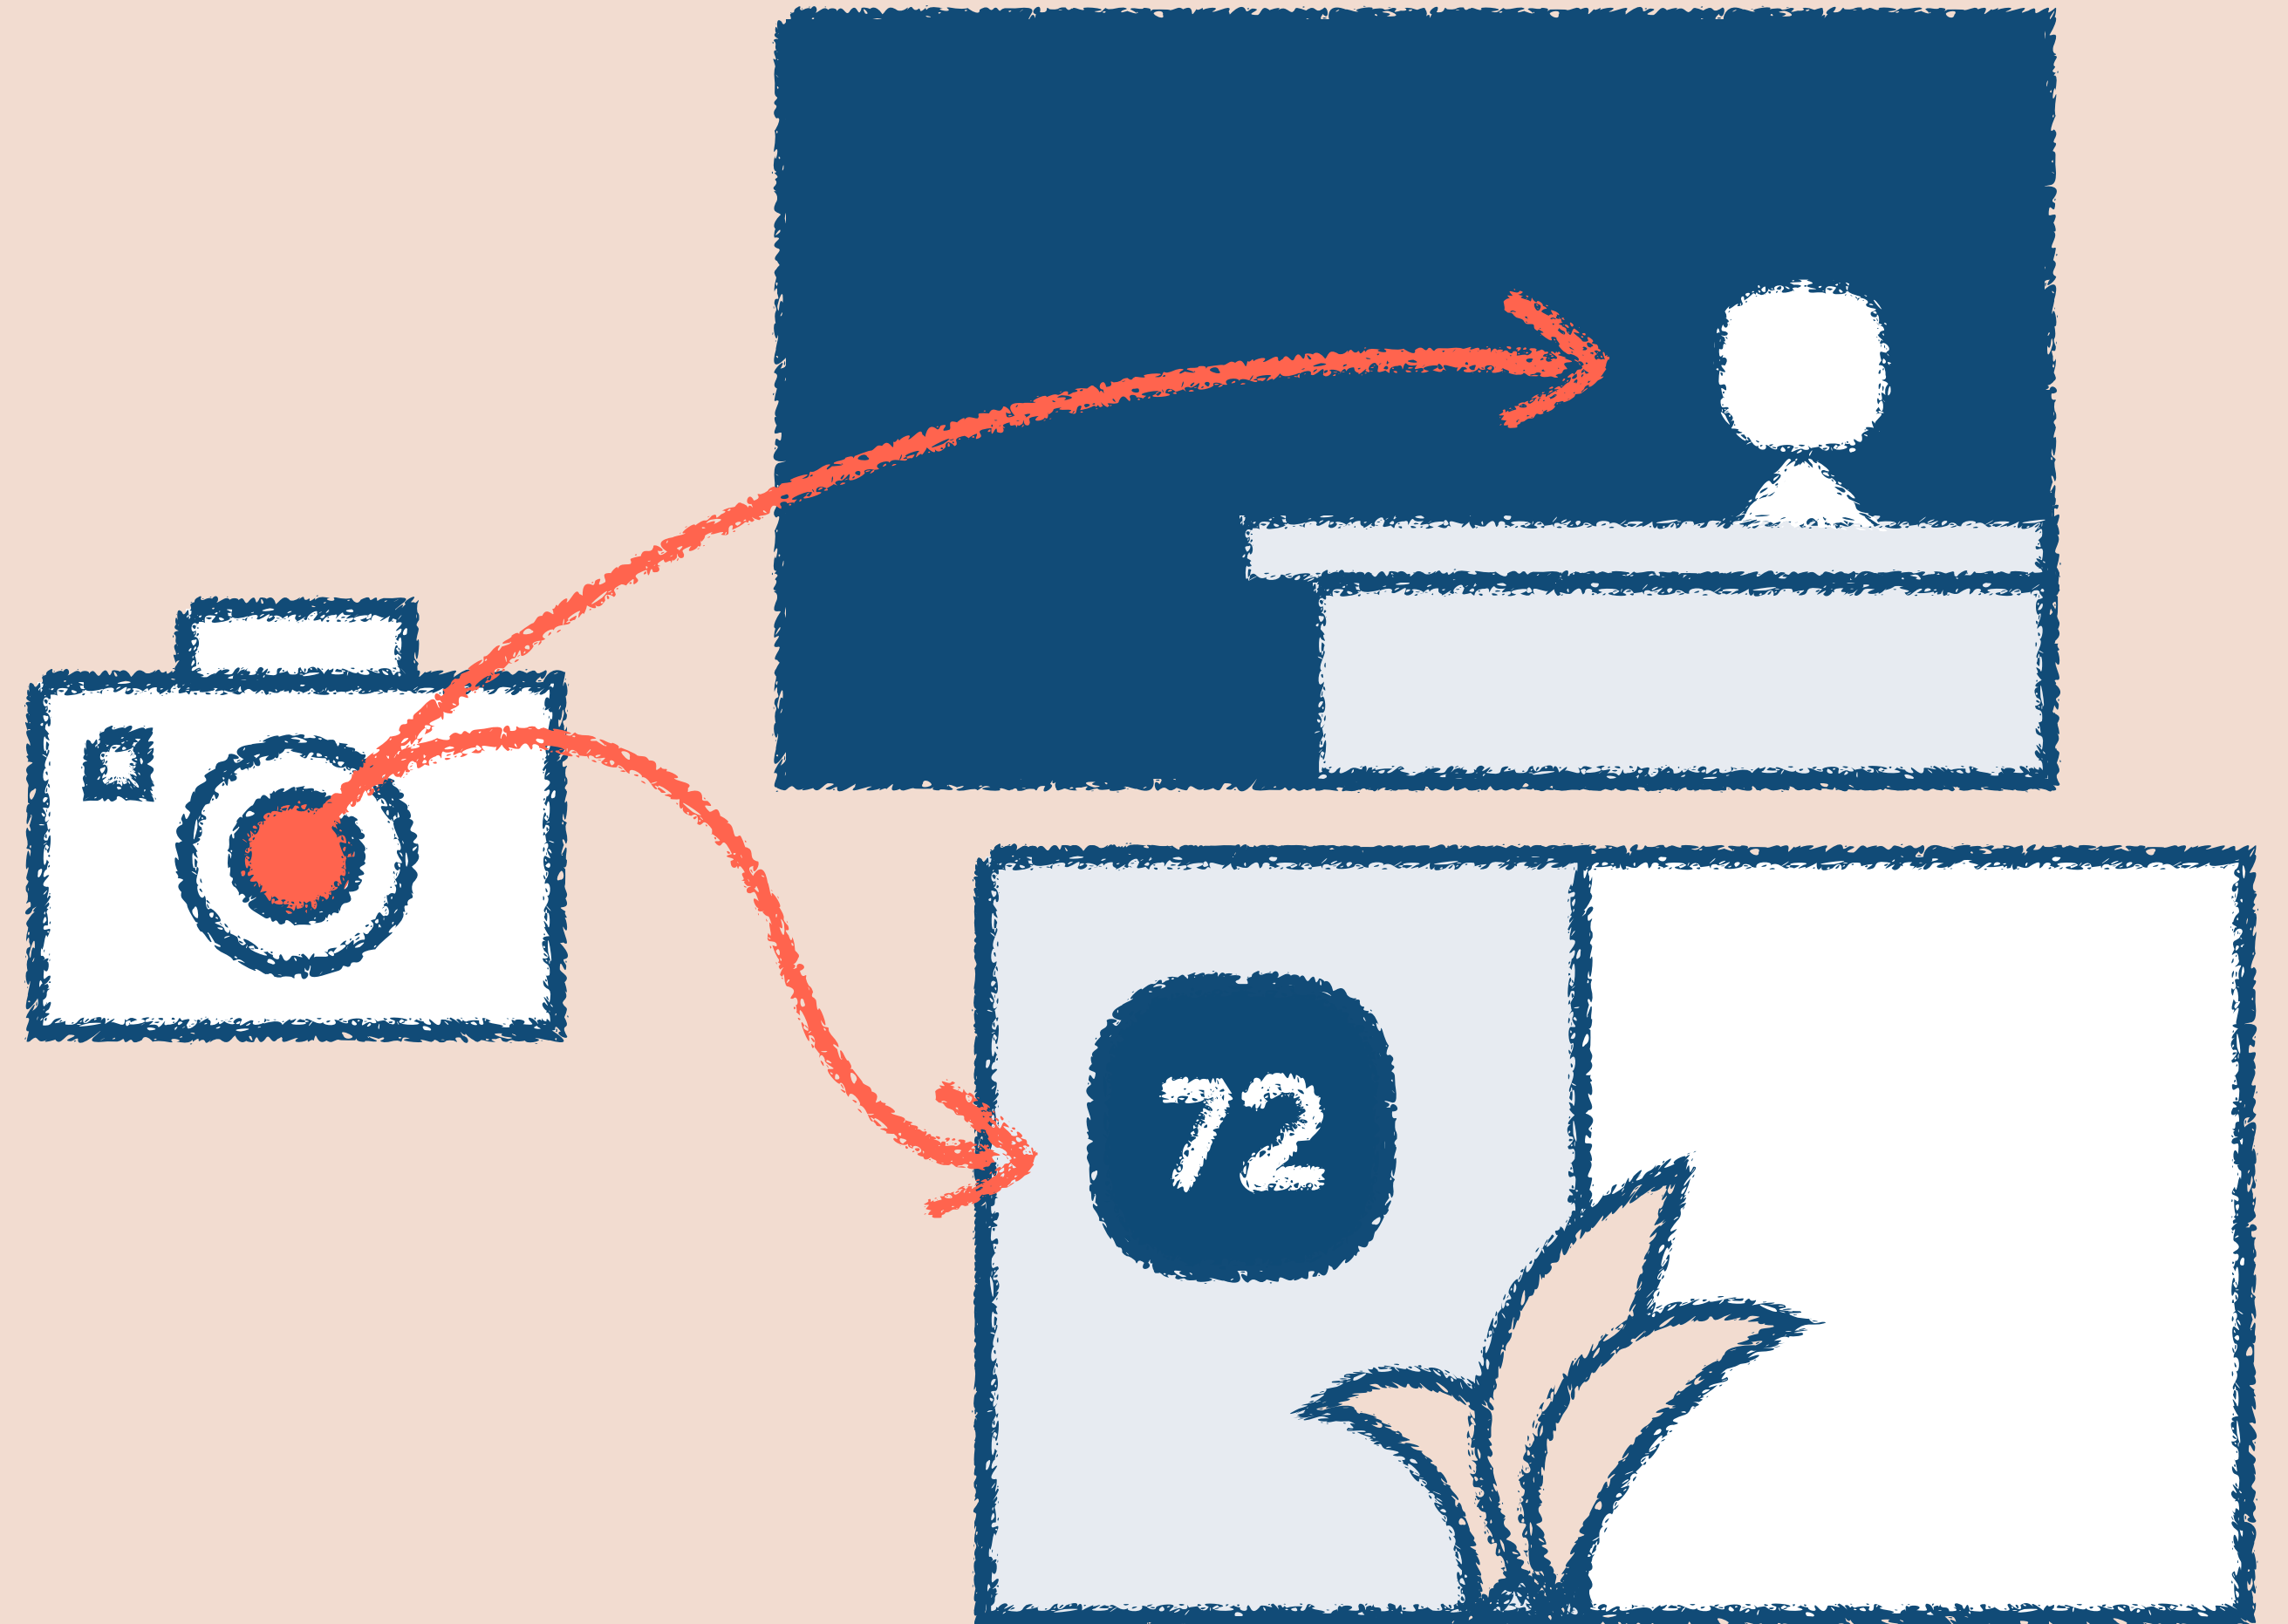

**Digital**

**Over time, our process evolved further**

- ✓ **No stock! 100% ownable content**
- ✓ **Storyboarded custom photography**
- ✓ **Better communication of features with appropriate creative assets**
- ✓ **More harmonious narrative**

***The problem:*** The Product and UX team were involved  
far too late in the process, with little to no time to incorporate any  
.....  
feedback before launch.  
.....

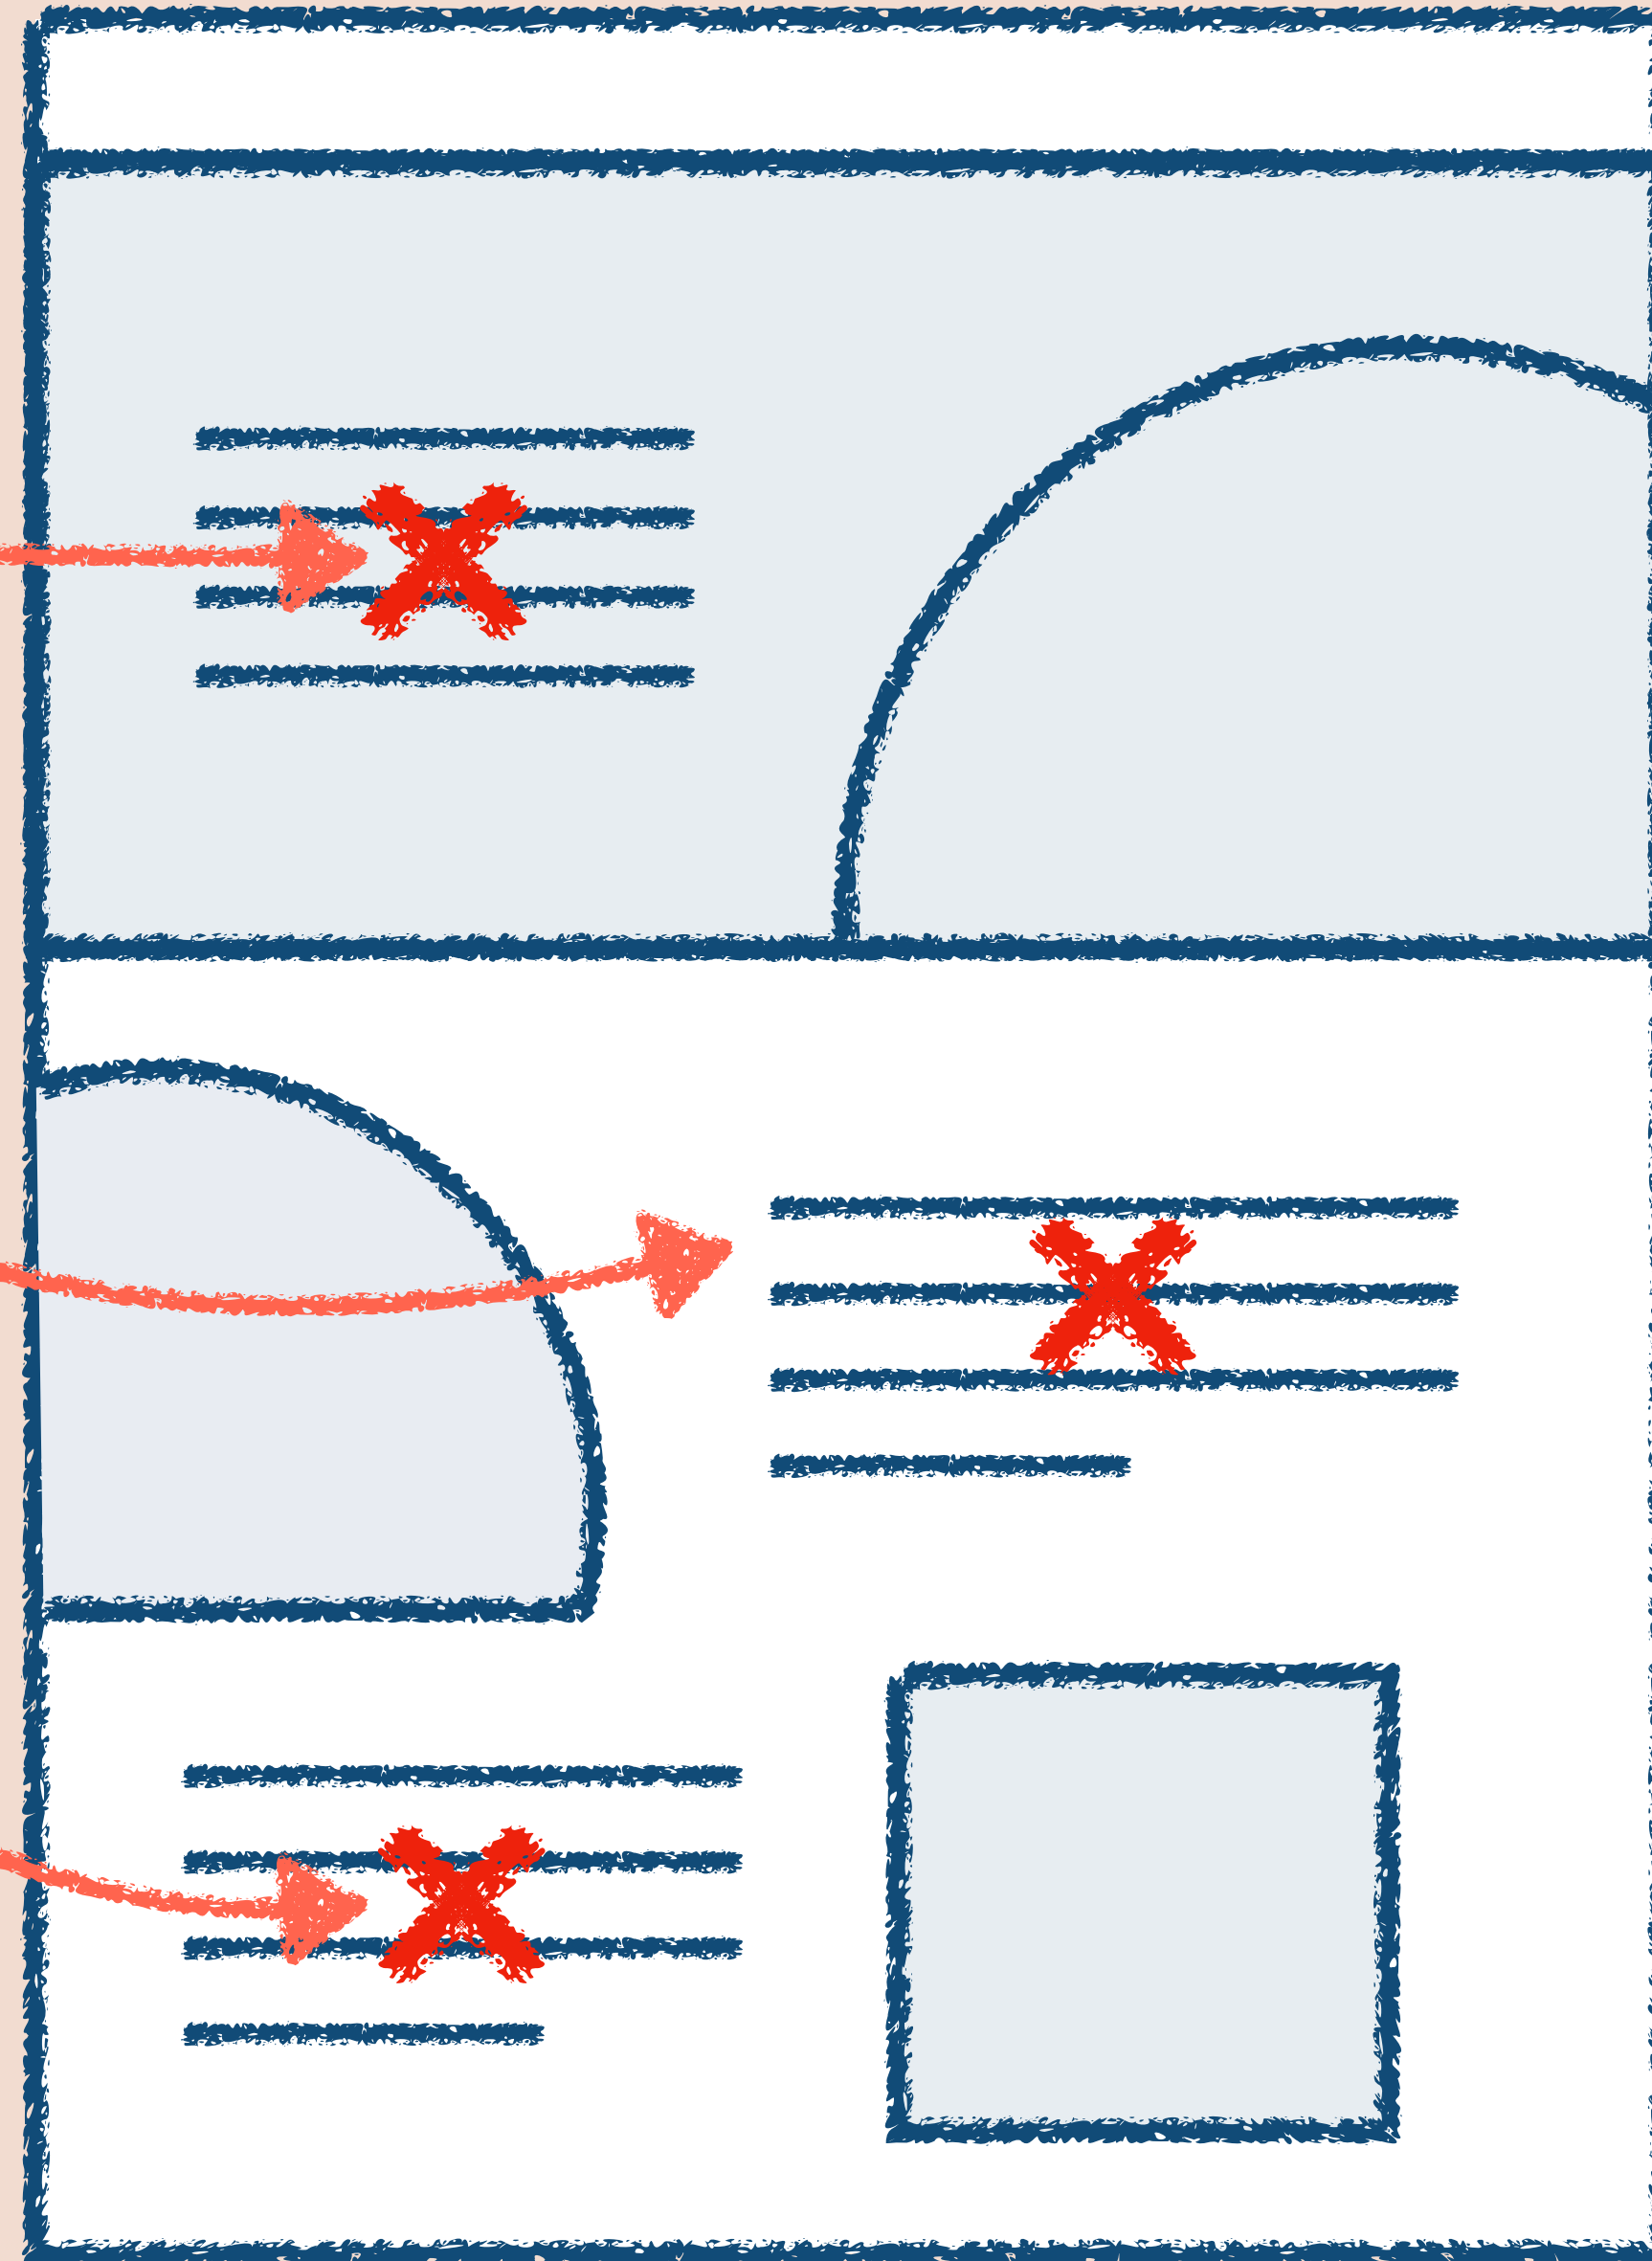

**Not how the product works**

**Integration doesn't exist**

**Value proposition inconsistent with app experience**

**Now that you've seen how it started, we will deep dive into how we've evolved the process to where it is today.**

**After reviewing our case study, we hope you'll ask yourself:**

- Is my UX organization working **close enough** with marketing?
- What more can we do to **further collaboration**?
- What **business results** can we achieve if we start working together?

# How we work today

# What we needed to do

**01**

Validate  
the problem

**02**

Determine  
the extent

**03**

Tailor our  
solution

**04**

Implement & test &  
standardize

***The challenge:*** How might we validate that the experience that  
we currently offer is consistently deliberate at each touchpoint?

# Problem validation process

**Customer service &  
QA interviews**

**Internal stakeholder  
interviews**

**Customer journey  
mapping**

***Broad question:*** How do we currently work together from  
Discover to Deploy?

.....

***Focused question:*** What are the gaps in our existing process that lead to the current inefficiency and misalignments?

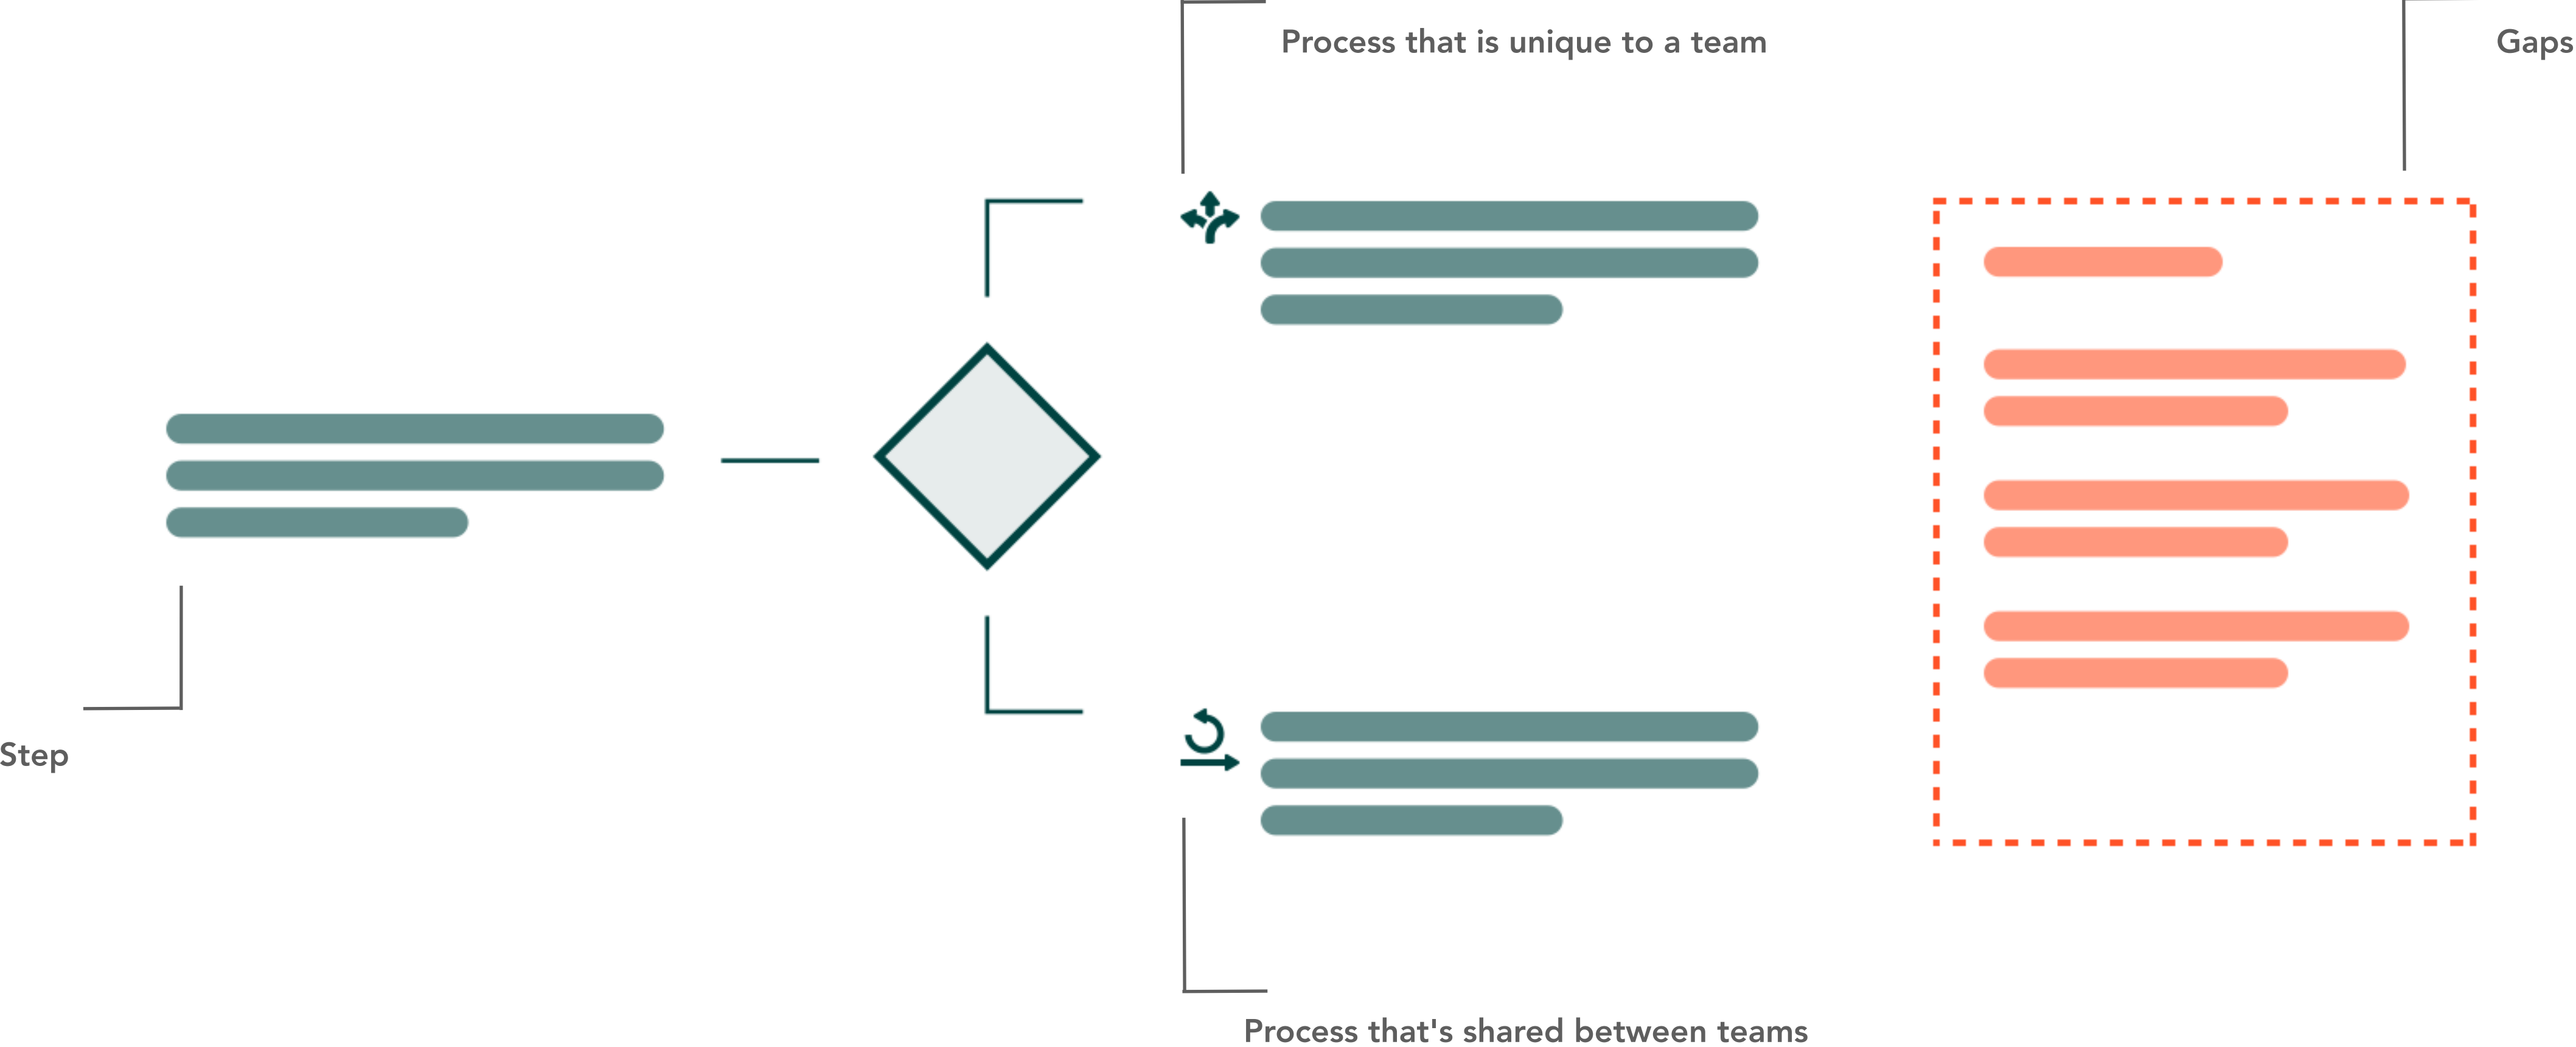

.....

# Our current workflow

# The *zoomed* in format

# Identifying gaps

**Unclear  
ownership**

**No seamless  
experience vision**

**No alignment  
cross-functionally**

**No standardized  
process**

# Crafting our principles

**01**

Alignment & cross-squad convos

**02**

Identification & progression to end state

**03**

Contextual awareness & minimal intrusiveness

**04**

Accountability & ownership

**05**

Channel optimization

**06**

Identify dependencies

**07**

Evaluate current cadence & prioritize

# SmartCamera as a Baby Monitor

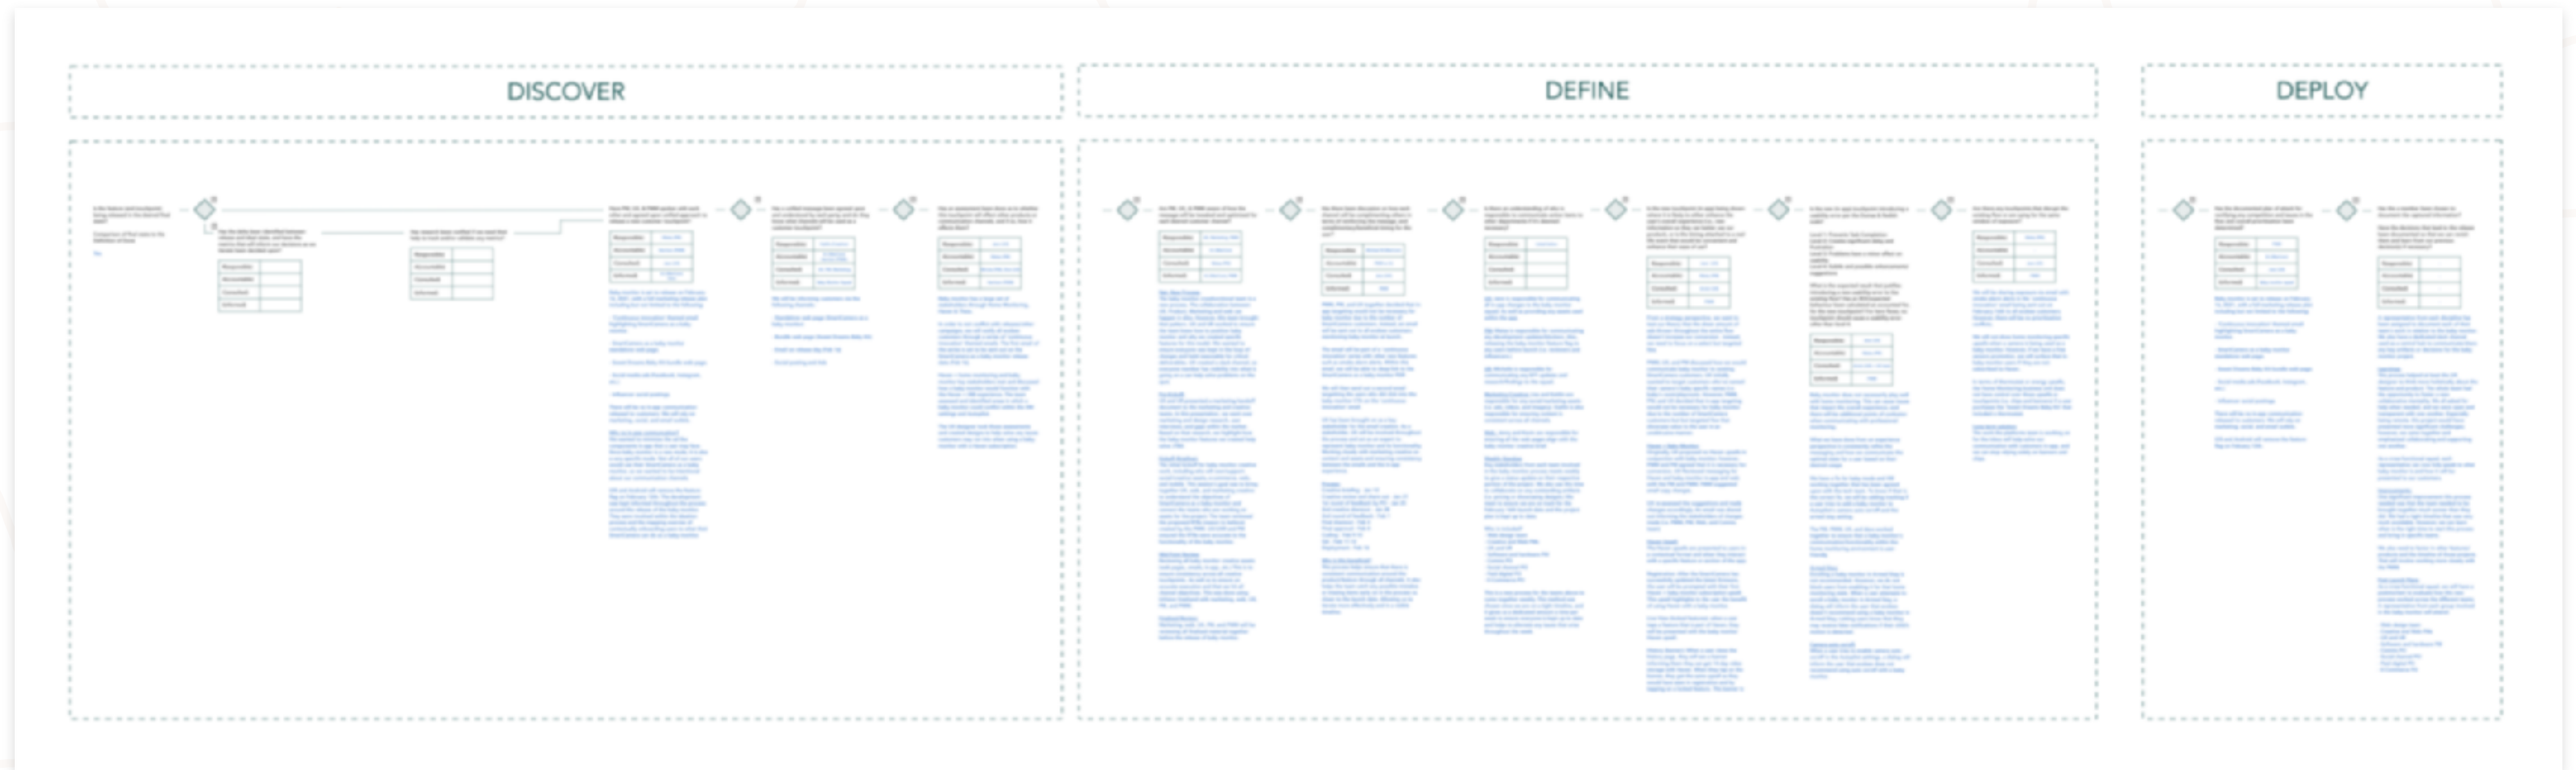

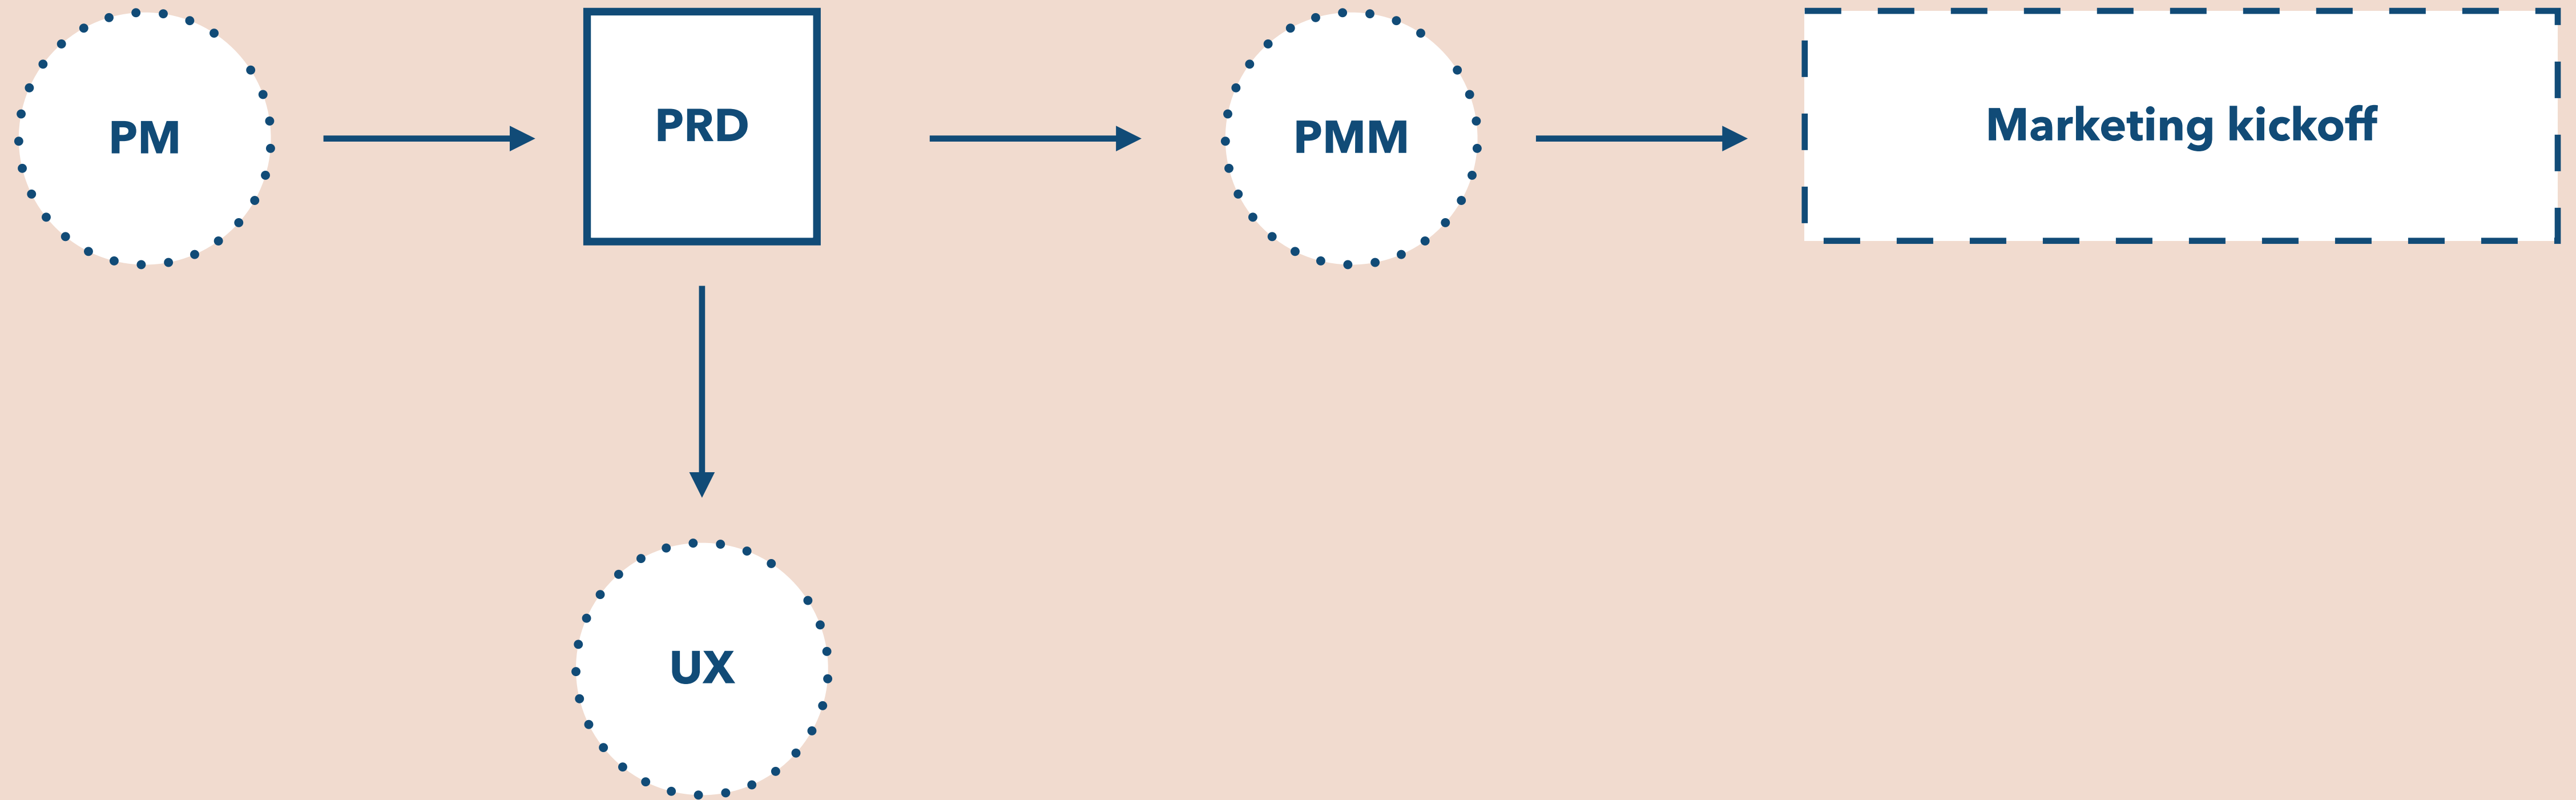

# The baby monitor process

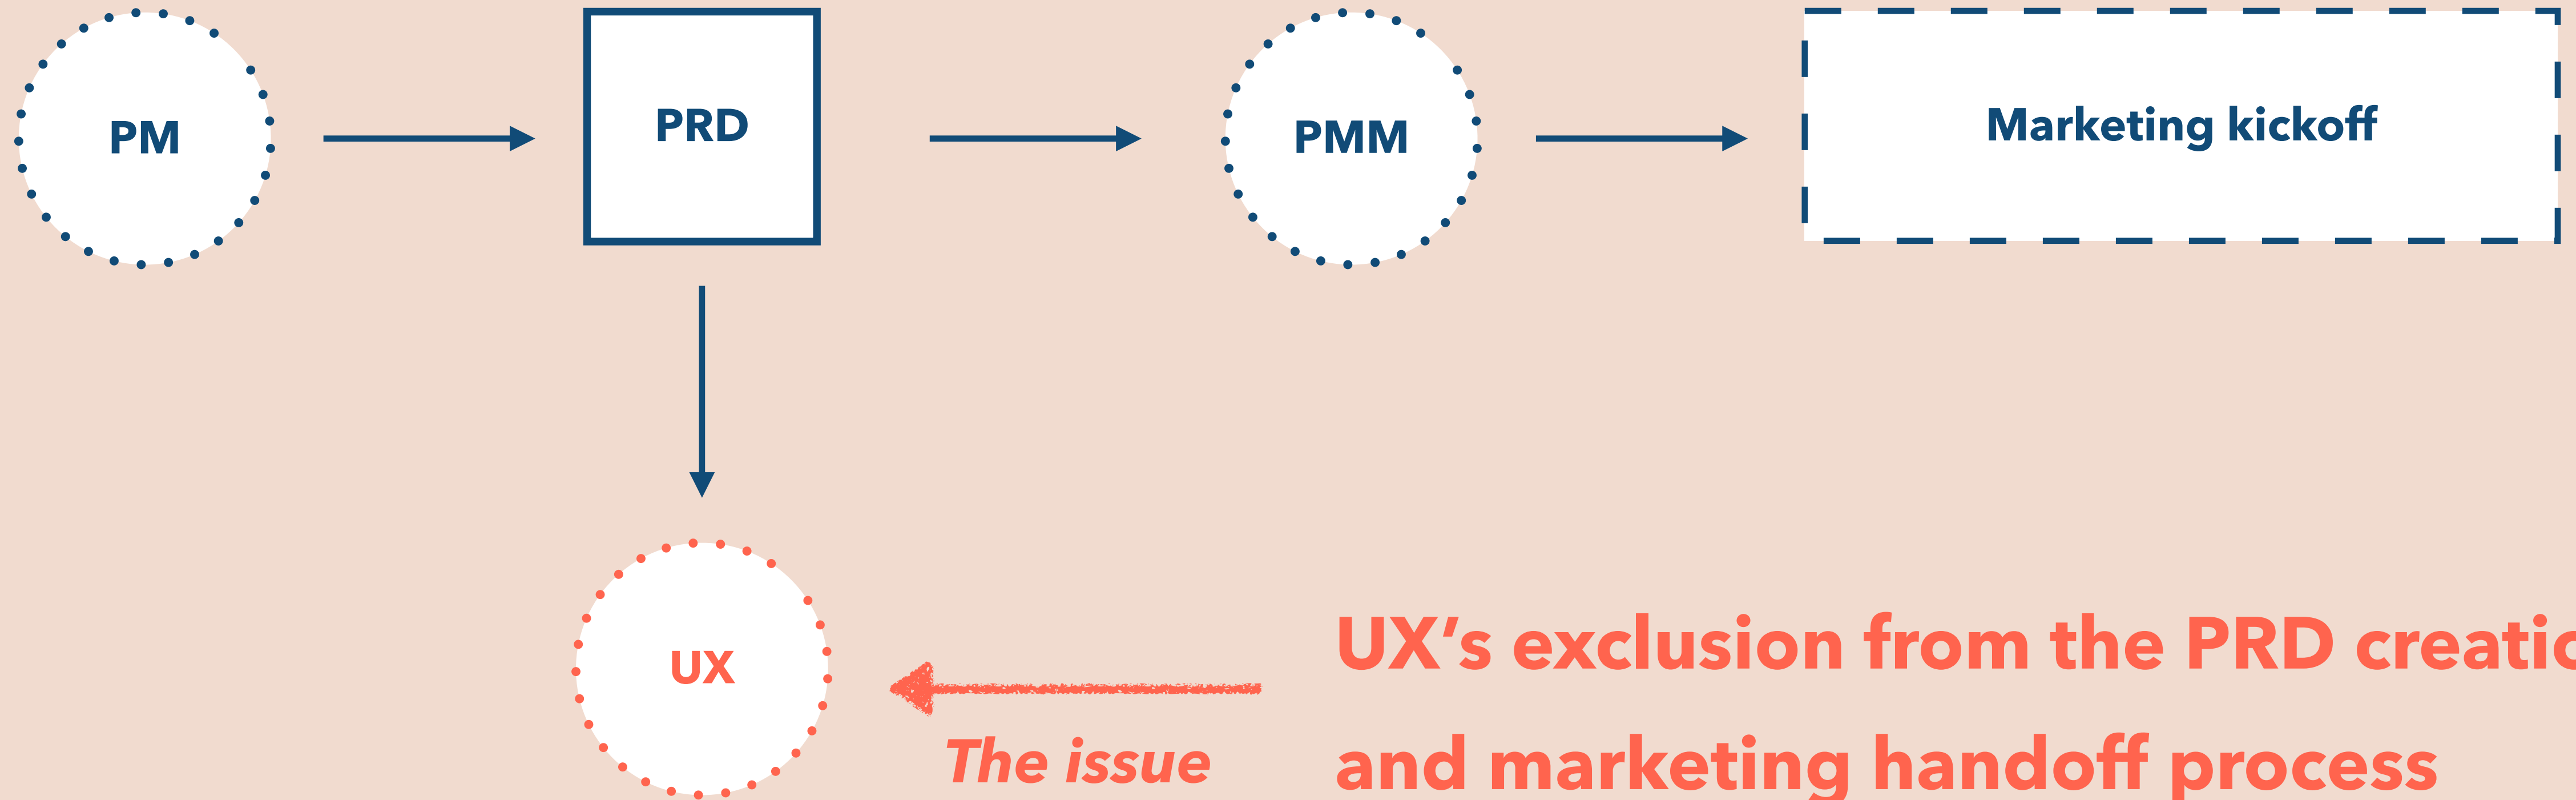

# The process at a *glance*

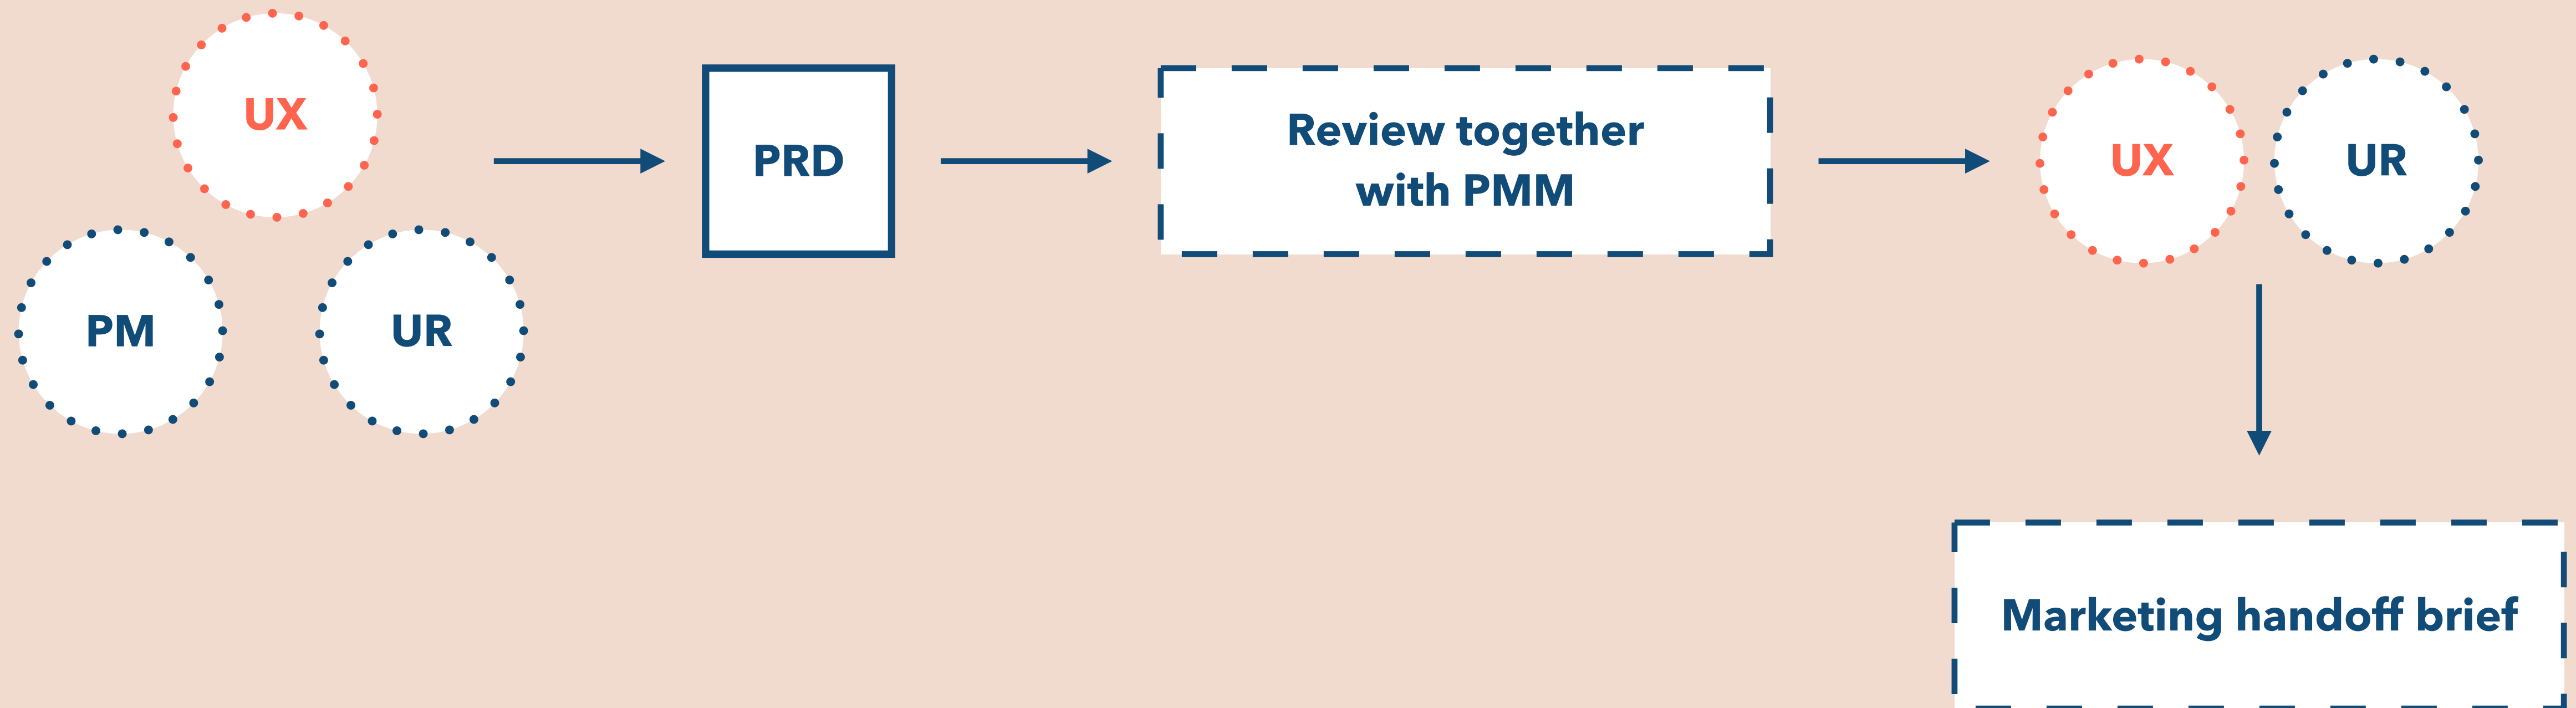

# The old working process

# The old working process

# The new working process

***The opportunity:*** Baby monitor provided an opportunity for UX and marketing to break the ‘throw over the fence’ mentality ..... and create a highly regimented process to ensure the best user experience across all channels.  
.....

# Working with marketing

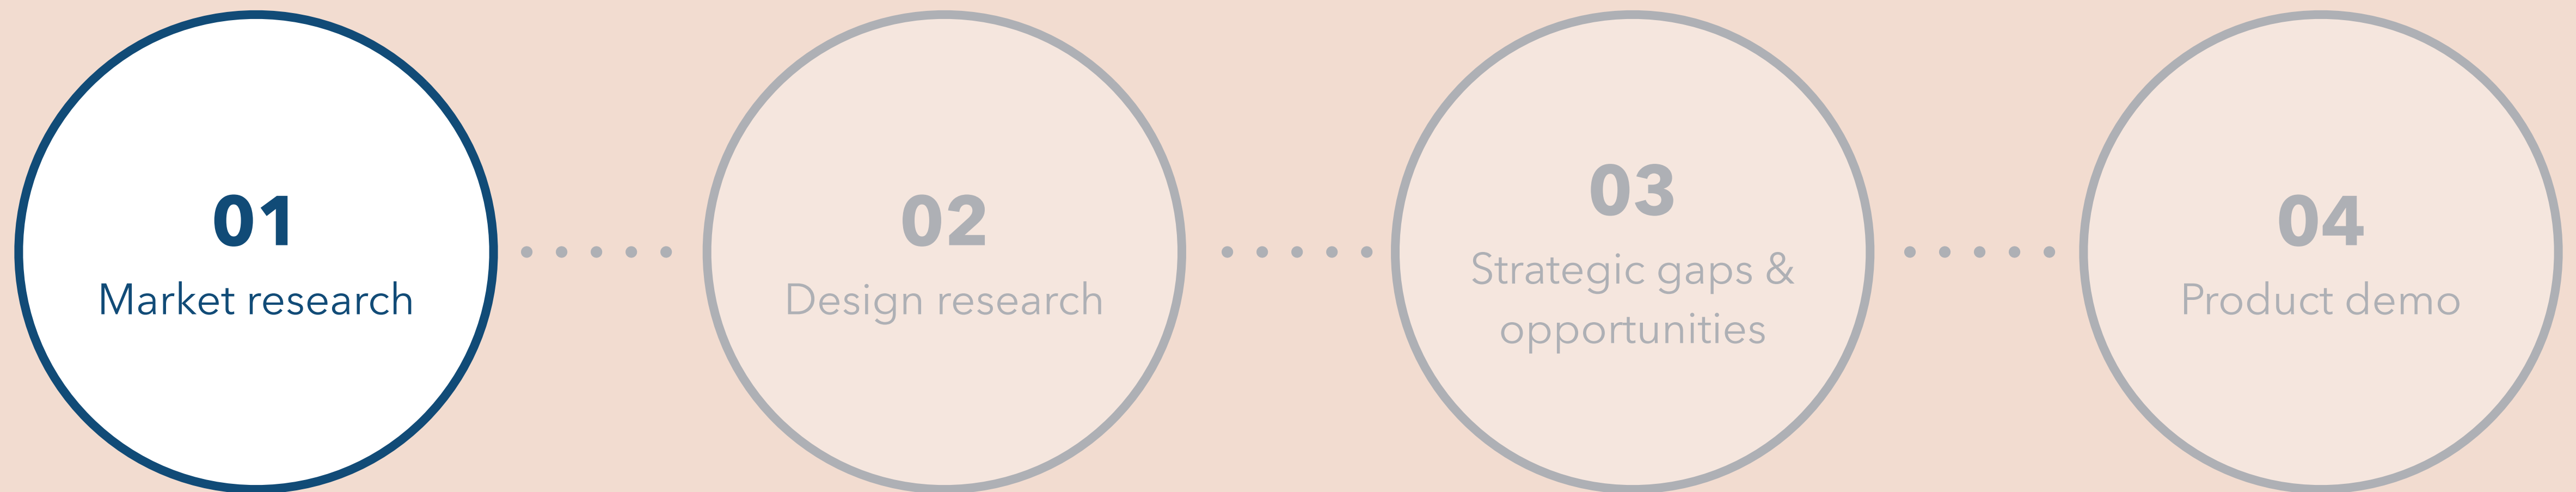

# Marketing handoff breakdown

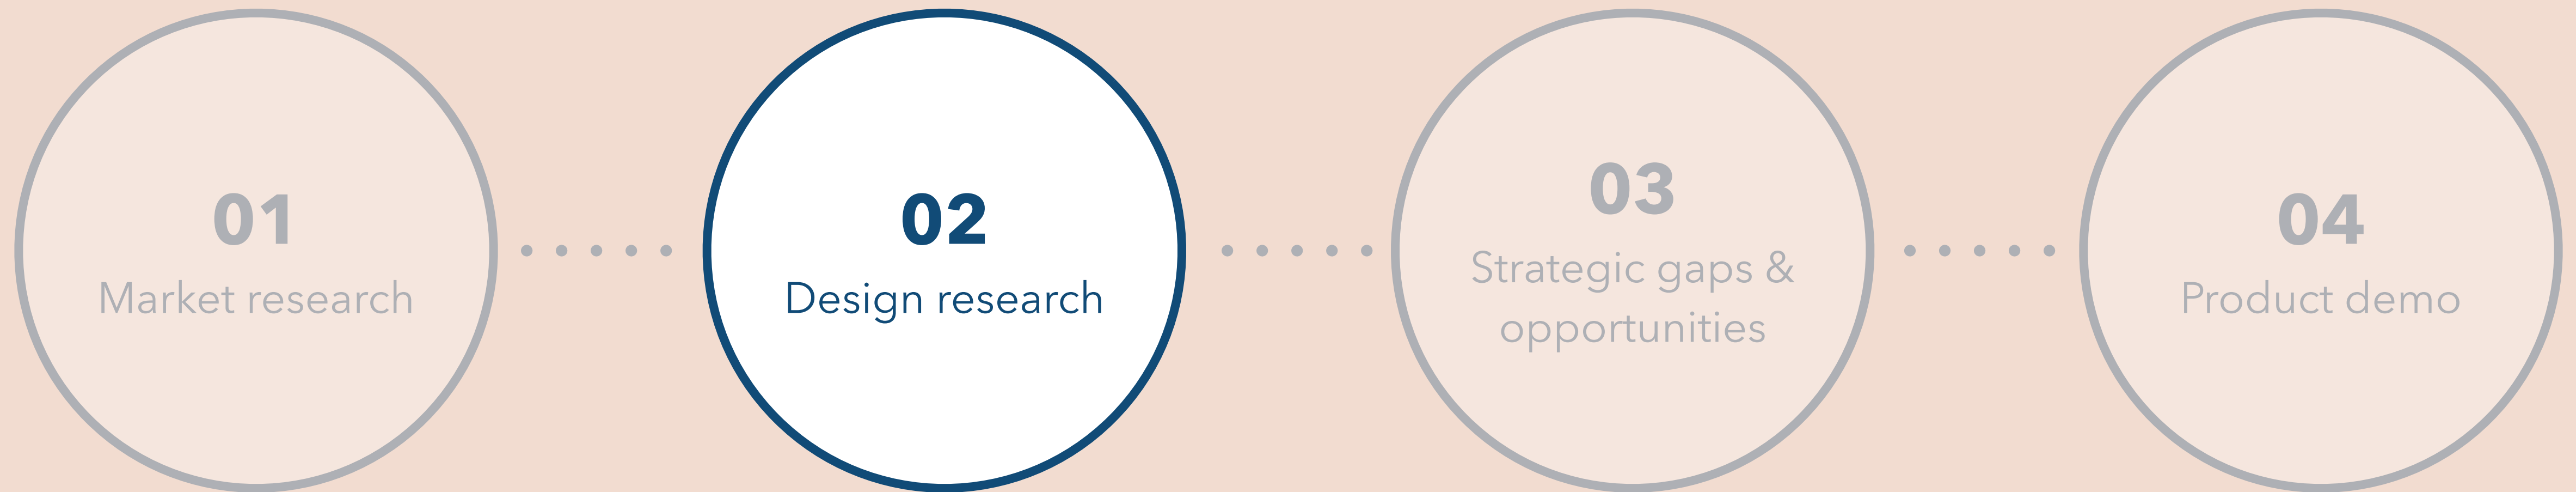

# Marketing handoff breakdown

- **Identify target audience**
- **Analyze market offerings**
- **Product market fit**

# Marketing handoff breakdown

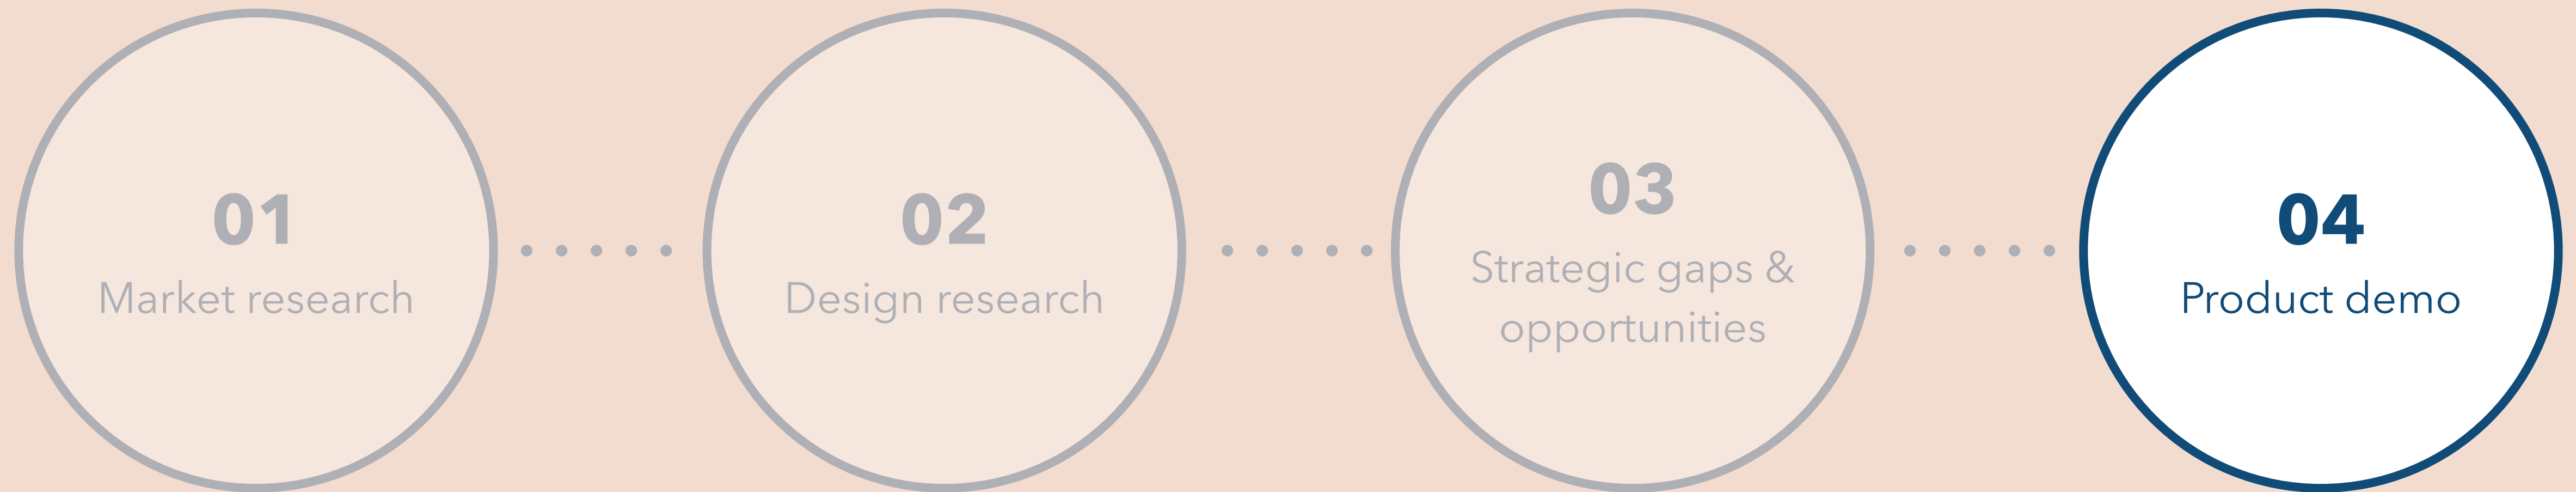

- **User interviews**
- **Identifying pain points**
- **Defining the JTBD**

# Marketing handoff breakdown

- **Competitor comparisons**
- **Identifying gaps**
- **Crafting opportunities**

# Marketing handoff breakdown

- **Review UX designs**
- **Feature breakdown**
- **JTBD solutions**

# Meet the marketing teams

**E-commerce**

**Digital**

**Creative**

**Social**

After Noah no longer needs a baby monitor, I plan on using my ecobee as a playroom monitor! An extra pair of eyes and ears are always welcome!

# Key touchpoints

So, how did we do?

**15x more web  
searches than  
SmartCamera**

**5x click  
through rate**

**27% of all new  
camera purchases**

# Changes within our organization

**Management  
buy-in**

**Became the gold  
standard**

**Amplified value  
of UX**

**End-to-end  
ownership**

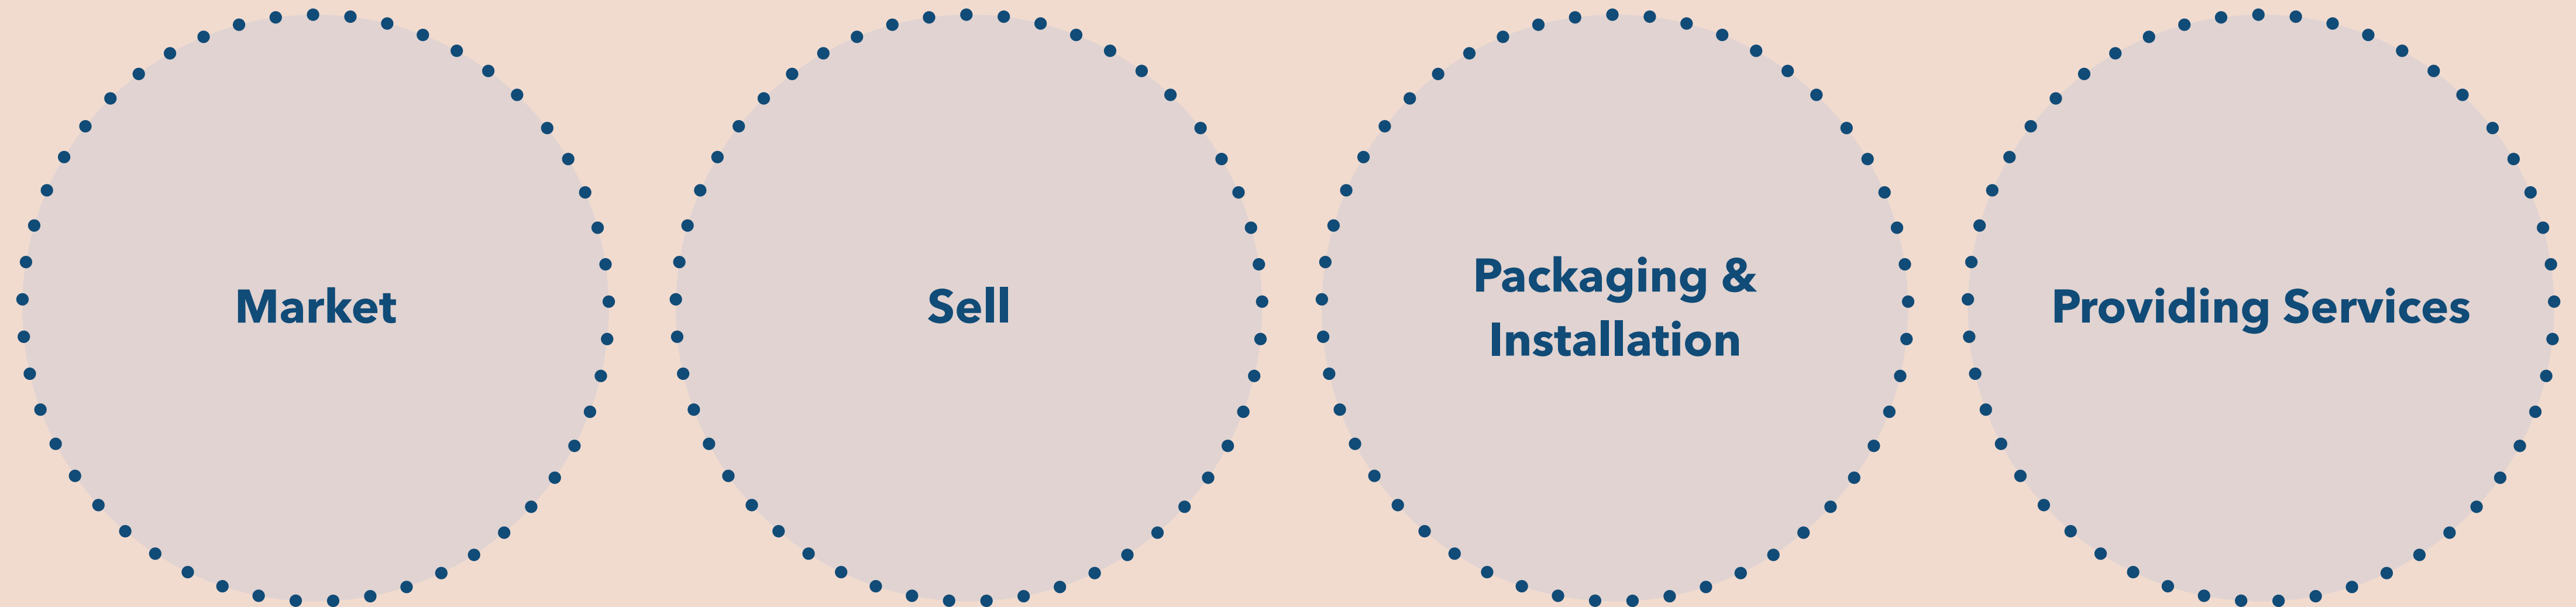

# Key takeaways

# Thoughts for your team

# Thoughts for your team

# Key takeaways 1/4

- **Pose the problem that you're solving in a form of a challenge question.** A well-framed challenge question inspires people to participate. Make sure your challenge question is solution-oriented (how), optimistic (might), and collaborative (we).
- **Don't overlook the QA and CS teams expertises in earlier stages of your process.** Consult them early on and take advantage of the depth of knowledge they have.
- **Consult multiple departments to get organizational buy-in.** By involving various teams in your process you're able to make them invested in your work and valued.

# Key takeaways 2/4

- **In creating a customer journey map, keep your scope contained by focusing on a particular phase in the e-commerce customer journey (awareness, consideration, purchase, service/usage and loyalty/advocacy).** Not every customer goes through the entire journey but this framework helps you think about the customer journey holistically and at the same time in phases that we can evaluate and optimize.
- **In creating a customer journey map, go beyond surface and capture information such as:** Moment (a point in time when a user has a specific need to fulfill), Micro-Moment (a moment when a user turns to a device or digital channel to act on a specific need), Cognitive Load (amount of mental processing power needed to accomplish the desired task), Physical Load, Unintended Consequences, Outbound Touchpoint (user initiated touchpoint), Inbound Touchpoint (ecobee initiated touchpoint), Organizational Context, Enhancement Opportunity, etc.

# Key takeaways 3/4

- **Think of Conway's law.** Ask yourself if your designs are inevitably a reflection of your organization's communication structure.
- **Ask your team "how can we improve?". You'll know you're on the right track when themes start emerging.** Focus on addressing the themes first.
- **Craft principles before you dive into solutions.** They will guide and inform your decision making.

# Key takeaways 4/4

- **Establish UX as a key stakeholder throughout the marketing project.** To ensure consistency across every channel, leave capacity for the design team to be able to collaborate and be involved beyond Define until launch and continuously during post launch. UX should be involved in reviewing assets, providing input, and supporting the marketing team throughout the process especially as decisions evolve past the Define phase.
- **Don't sacrifice having a standardized process and documenting decisions made in the name of being agile.** This gives the team a source of truth, helps ensure past inefficiencies are not repeated and empowers the team to iterate on the existing processes rather than reinventing the wheel every time.
